35mm Color Slide Makers: DICOMED DDC Format Conversion

This article last reviewed: 29 August 1988

There have been requests for a product that takes presentation graphics (35mm color slides) prepared on a DICOMED system and converts them for use, editing, or display, on a color Macintosh II. DICOMED has two file formats. The "DDC" file format works with DICOMED's film recorder. The "DICOMEDia" file format works with other DICOMED equipment.

The 'DDC' file format is included in the film recorder's documentation. Currently there is no product that can translate DDC to/from Macintosh. However, with documentation available for both 'DDC' and Macintosh, a translator could be written.

The 'DICOMEDia' file format is propriety. An application exists that converts Macintosh images to the 'DICOMEDia' format. However, it does not convert 'DICOMEDia' to Macintosh. This program is available from Stradeware of Denver, Colorado.

For more information, search on "Stradeware".
