Mac 'N Touch Touch-screen Monitor Works with HyperCard

Article Created: 26 February 1991

Article Reviewed/Updated: 5 June 1992

TOPIC -----

I am looking for a touch screen monitor that can be used with HyperCard.

DISCUSSION -----

MicroTouch, Inc. makes a low-cost touch screen monitor called Mac 'N Touch that works with nearly all Macintosh systems. It is based on the Magnavox 9CM080, which is capable of displaying up to 256 colors from a palette of more than 16 million with a resolution of 640 by 480. The monitor has a 14-inch display with a 0.25mm dot pitch. MicroTouch verified that their product does work with HyperCard.

To locate a vendor's address and phone numbers, use vendor name as a search string.
