## LaserWriter: Font Substitution Printing Problem

Article Created: 29 April 1991

### TOPIC -----

I have suddenly begun experiencing printing problems on my LaserWriter. When I try to print with Adobe fonts, the system responds that it is "substituting a bit mapped version, as the printer font can't be found". The LaserWriter then prints using the Courier font.

This problem happened after I did some work on my System file. I was having a font ID conflict, so I removed all but the required fonts then reinstalled the fonts one-at-a-time.

Of course, all my printer fonts are in a Printer Folder.

### DISCUSSION -----

This sounds like your PostScript fonts are not downloading. Are your fonts in the System Folder or in a folder in the System Folder? Put them at the first level of your System Folder; don't embed them in another sub-folder.

Also, be sure font substitution is off in your Page Setup dialog box.
