LaserWriter: How To Get Hardcopy Error Printouts

This article last reviewed: 8 September 1988

Some users want to set the LaserWriter to print errors on a page rather than sending the message back to the host. Many of these users have heard that a variable in "errordict" needs to be changed, and have asked about the name of the variable.

Getting the LaserWriter to print errors is certainly possible, but it is not as simple as changing the value of a variable. Adobe Systems provides a PostScript program, "The Error Handler", that will do the job.
