## LaserWriter Plus: Double-Blinking Status Light

Article Created: 4 April 1991

Article Last Updated:

TOPIC -----

I'm having a problem with a LaserWriter Plus (recently upgraded) connected to an IBM. The "Busy" status light sometimes has an uncharacteristic "double blink," as opposed to the normal "single blink" when processing jobs. Also, when PostScript jobs from some applications are completed, the status light does not turn off, but instead starts to "double blink." What does a "double blinking" status light mean?

DISCUSSION -----

The double-blinking light is normal. In certain instances, the yellow light continues to flash, indicating it is processing a job. This is most evident when you do a manual feed and insert the paper before the red jam-light comes on. Also, if an end-of-page command is not sent when printing from an MS-DOS machine, the lights continue to flash.
