LaserWriter: Automatic Setup with Spooled LaserWriter (5/93)

Article Created: 5 May 1993

TOPIC -----

The SETUP command in the Chooser does not work when my LaserWriter Pro 630 is captured by AppleShare PrintServer 3.0.1. I'm using LaserWriter driver 7.2 and as I understand, SETUP needs to be performed in order to display the paper source and imaging options of the printer in the Print dialog box. How can I "SETUP" my spooled LaserWriter Pro 630?

DISCUSSION -----

The automatic SETUP feature does not work when a LaserWriter is spooled. To use this feature on a spooled LaserWriter, hold down the OPTION key when selecting SETUP. This is a power-user feature that will enable the user to manually select the type of printer connected and the options installed -- such as the 500-sheet tray. Once this is done, all of the available printer options will show up correctly in the Print dialog box.
