- For technical accuracy.

TOPIC -----

I have a LaserWriter connected to a Macintosh LC with an Apple IIe Card. The LaserWriter uses the multipurpose tray. I configure the IIe Card software to use the Printer Port (slot 1) to print to the LaserWriter.

When printing a legal-size document in AppleWorks 3.0, I run into printing anomalies. If I specify a 14-inch page in AppleWorks and print the document on an ImageWriter II, the document prints on one page. If I print to the LaserWriter with legal-size paper in the tray, it prints 11 inches only and finishes the document (2 more lines) on the second page. The margin settings are .5-inch left and right, and 0 top and bottom.

DISCUSSION -----

We've confirmed this anomaly and anticipate it will be corrected in a future release of the software.

At this point we can suggest no workaround.
