TOPIC -----

I'm trying to print a MORE document with a SuperPaint picture. The last page of the document prints fine on a LaserWriter, but takes a long time on a LaserWriter IINT.

Is there a problem with the LaserWriter IINT?

DISCUSSION -----

There are several possible causes for slow printing on a LaserWriter IINT:

- There are too many fonts downloaded to the LaserWriter IINT's memory.
- There is an Apple II printing to the LaserWriter IINT. An Apple II slows down the LaserWriter IINT by downloading an ImageWriter emulator.
- There is a network problem causing the LaserWriter IINT to retry. Use Inter•Poll and send several thousand packets to the printer to see how many packets come back with errors. Too many errors suggests a bad cable or printer I/O board.
