LaserWriter IINTX: HD Fonts Are Accessible To IBM AT Compatibles

This article last reviewed: 6 October 1988

If you have been using a LaserWriter Plus, your IBM PC/AT or clone can also access the fonts resident in the LaserWriter IINTX hard drive through the RS-232 interface.

The fonts installed on the LaserWriter IINTX hard disk will appear as if they were in the LaserWriter IINTX ROM. All fonts, whether in ROM or installed on the hard disk, should be fully accessible to any PC/AT or AT clone that can already access the fonts in a LaserWriter Plus.

Adobe and Apple designed the hard disk option so that LaserWriter IINTX operates transparently, and the user can thus access additional fonts without having to download them with utilities.
