LaserWriter: Macintosh SE Connection with ImageWriter Cable

This article last reviewed: 30 November 1990

TOPIC -----

I hooked up a LaserWriter IINT to a Macintosh SE for local printing using an ImageWriter cable, and it worked! Is this okay?

DISCUSSION -----

When you connect to a LaserWriter in this fashion, you are in reality still running LocalTalk between the Macintosh and the LaserWriter. Although this works in most cases, it is not a supported configuration, and we do not recommend using it. Instead, use the proper cabling necessary to implement a LocalTalk connection between the LaserWriter and the Macintosh.
